SUBJECT: New Methods for Analysis of Fire Data

DATE OF MEETING: 4/18/2000

LOG ENTRY SOURCE: Michael A. Greene, Mathematical Statistician, Division of Hazard Analysis

DATE OF LOG ENTRY: 7/17/2000

LOCATION: National Fire Protection Association Headquarters, Quincy, MA

CPSC ATTENDEE(S): Michael A. Greene

NON-CPSC ATTENDEE(S): John Hall, Jr., Nancy Schwartz, Mike Karter, Kim Rohr. All NFPA staff.

SUMMARY OF MEETING: Following a short lunch with John Hall, I presented two briefings to the Non CPSC attendees; all members of the NFPA Fire Analysis and Research Division. The first briefing was about post-stratifying the NFIRS data into the NFPA strata, then computing a stratified sample estimator for product related loss. The second briefing was on the new surveys for fire deaths and injuries using death certificates and NEISS. After the briefings, I spoke with Rita Fahy, (NFPA database administrator) about obtaining some or all of the NFPA Fire department list.
